Freeware has always been wild and wooly. Unlike software sold to large corporations, where money is gained by restricting users to work within the rules, freeware is often grown directly with its users. You've likely used a utility that tags photographs with information such as the latitude and longitude of where you snapped the shot. I use a freeware program called GeoTag, which searched the internet for geo-tagged image files and automatically added that data to them. The program works by finding similar photographs, i.e. those taken at similar times and places, and, through a combination of photo-editing and map-searching, connects them. Simply put, you can search by latitude and longitude and see a Google Earth-like map. In the fall of 2012, Google commissioned AR agency **Freeware**, **Freeware** had created a creative poster promoting their Google Glass project. This Poster We Like , however, offers a better use of **Freeware**. The Adobe Photoshop Creative Cloud app has been refresh with several interesting new features and improvements, such as Photoshop Mix, Speed Mask, and Erase Edges. All Creatives have had the ability to edit smaller items with the Erase Edges tool, but the upcoming release will allow for greater control over the pixel editing technique. We're aware there is a temptation for more users to launch the raw image editors such as Photoshop and Photoshop Elements. While the new features and abilities in this release show a significant effort by Adobe to try to maintain the professionalism of the platform, we're still saddened that the community has felt the need to take this step. We are constantly working to make Photoshop more streamlined. Don't worry, there are more features to come (see Future Enhancements and the updates below).

use in your photos. This tool lets you work within each individual swatch instead of the bigger selection area of either the Protect (or Fill) tool or the Adjust (or Adjustment) layer.
